'DJ Juke' is a utility for professional DJs to mix audio tracks in a professional way. The program makes available two decks that work just like the other professional mixing software that we know and love. You can build a playlist as well as an extensive history of the previously played tracks. The program includes tools for manipulating the music tracks in a professional way. At each moment there are time-related details for the playing audio; this includes the current play time, the total duration or the remaining time. Moving to a different track can be done smoothly, using the "fade out effect" that makes the transition seamless. With the built-in Dynamics Processor users can access a few presets (Lounge, DJ, Party, Office, Radio) for changing the type of the sound. For those that want to automate the music playing, moving the items into the desired position in the playlist and checking the history data to see what has already played are essential tasks. Pitch and tempo can be modified on the spot for the playing song so that a fun and at the same time cool effect is obtained. The application comes with a set of samples that can be used for learning the ropes quickly and easily. In the automated DJ function everything plays without any intervention from the user and the result is a radio-like experience. Features: o Get the high-quality sound on any device o Powerful effects: automatic adjusting of the pitch, dynamics, echo and reverb o Automatic mixing between the tracks for a seamless transition from track to track o Automatic shifting between the two music decks o Automatic process of the remaining time (0% to 100%) o Supports mp3, ogg, wav and midi music formats o Uses the effects settings of the DJ mixer software o Use the Dynamic Processor for shaping the sound o Supports the listening of the music on any device o Checks the status of the music playback with the remaining time o Automatic generation of a song list o Assists the user in making song list for DJ o A hidden song history screen for the automated DJ mode System requirements: Windows Processor: Intel or AMD x86, Pentium III or better Memory: 128MB of RAM Disk space: 7-50MB DirectX: 9.0 Internet connection required For a Mac OS X user, the hardware requirements are the same as the Windows ones: 94e911d2d9

- Bug fixes Requirements: OS X 10.10 or later Price: \$19.99. Free for a limited time Happy music editing you can find the latest version of the FabMix application in the Mac App Store. The program allows you to create the best DJ mix with your smartphone or tablet. As the interface is similar to the one on a mixer, it is not difficult to use. The software has a number of tools that are of particular value in the field of mixing music: for example, there are two tracks for each musical sample, which allows you to create loops and create an easy template for the song. The application offers different possibilities for creating the mix, but it is the sound and the ability to edit and modify it in order to create a complete recording that makes it a great tool. The application has many functions that make it easy to mix songs quickly. Among them we can find, for example: the possibility to use the DAD instrument to delete or mix individual notes of a song, the drag and drop function for rearranging the songs in the playlist, the facilities for turning a song into a loop. The application features several features that allow you to work in a professional way, such as using the graphic equalizer and allowing you to adjust the pitch and tempo of the music. Finally, FabMix lets you choose the type of music you want to use for the mixing. To do this, simply type in the text box which is on the bottom of the interface. You can choose the name of the music, the language of the recording, and whether you want to use the original or a remastered version. If you need to, you can record a sample to play at any time in order to check the quality. What's New in FabMix: - Bug fixes Requirements: OS X 10.10 or later Price: \$2.99. Free for a limited time The Mixer is a dedicated audio mixing application for editing and converting audio and MIDI files. It is not an audio editor or sequencer but simply a mixer for Mac and works with high-definition audio files, without audio manipulation. The interface has all the functions you will need to make a good mix and helps you do it with ease. The main advantage of this app is that it is available at no cost and does not have many features that are not essential. You can combine audio files into a playlist, choose a sample
